

THE KITCHEN STANDARDS PRACTICE OF KUROKAA

The Pass

Find it before they do.

A chef trained in the UK inspection system walks your kitchen unannounced, against 63 written controls. You get the serious findings out loud the same day, a report in 72 hours, and a 30-day plan.

THE LINE, MID-SERVICE

63

CONTROLS CHECKED

90

MINUTES ON SITE

72

HOURS TO YOUR
REPORT

₹10–25k

FIXED, QUOTED FIRST

NOT AN FSSAI-RECOGNISED AUDIT • NOT A CERTIFICATION • NO INSPECTION RELIEF

WHY IT MATTERS

Nobody calls ahead.

Enforcement arrives unannounced — that is the point of it. So the honest question is not *are the records in order?* It is *would you survive an inspection this Tuesday, mid-service, with the fridge you have been meaning to fix?*

WHAT IT COSTS

A suspension closes the doors

- Licences suspended under section 32 of the Food Safety and Standards Act
- Spot fines levied and stock seized on the day
- Shutters down, staff idle, rent still due

WHAT IT COSTS

The reputation outlasts the fix

- The repair takes a week
- The photo of your shutter with a notice on it lasts as long as the internet
- Regulars find somewhere else to eat and stay there

WHAT IT COSTS

The failure is never exotic

- A fridge nobody probed
- A water test nobody booked
- A record nobody signed — cheap to fix, invisible from the inside

Most kitchens genuinely do not know where they stand. Not because anyone is careless — because nobody has walked the room with a written standard in hand and said so. The chef is too close to it, the owner is looking at the P&L, and the first person to look properly is usually holding a notice pad.

WHAT WE DO

Ninety minutes, *unannounced*.

You agree a window — a fortnight, say — and we arrive inside it without telling you when. A scheduled review measures how well you tidy up. An unannounced one measures how you actually run.

WE WALK IT IN THE ORDER FOOD MOVES — DELIVERY DOOR TO PLATE

01 Receiving	02 Dry store	03 Chilled	04 Frozen	05 Prep
06 Cook	07 Hold	08 Service	09 Wash-up	10 Waste

In that order, because the failures live in the joins between sections.

ON THE DAY

Ninety minutes, *start to finish.*

0:00 We arrive and introduce ourselves

Engagement letter and photo ID. No one to authorise the visit? We wait or come back.

0:05 The full walk, in flow order

All ten stages, against the written control set.

0:45 Every unit probed – and your probe too

Temperatures taken into food, not read off a door. A probe reading three degrees warm means months of records written in good faith and wrong.

0:57 Thirty days of records

Temperature logs, cleaning, pest, water test, licence, training, oil disposal. We look for gaps – and for the too-perfect.

1:12 Two conversations with your team

Not a test, and nobody is reported for an answer. It tells us whether the system lives in your people or only on paper.

1:22 You hear the serious findings before we leave

Anything critical is said out loud, on the day. Nothing urgent waits for a document.

WHAT LANDS IN YOUR INBOX

A report in 72 hours

- A plain answer to whether this kitchen would withstand an inspection today
- Every finding graded critical, major, minor or observation, each with a deadline
- Dated photographs of what was found
- A thirty-day plan ordered by what is cheapest and fastest to put right
- What we could not assess, and why – a report claiming to have seen everything is exaggerating

WHAT HAPPENS TO WHAT WE SEE

Where all of it goes

- The report goes to you. Not a regulator, landlord or insurer – unless you ask us in writing
- Photos are of findings, not people. A drain or a shelf, never a member of your team at work
- Your staff are never named. Nothing anyone says is attributed
- No case studies without your written permission, asked for afterwards and easy to refuse
- We keep the file two years so a re-visit has something to compare against, then delete it

THE ONE THING WE RESERVE

The right to end the engagement if something critical is found and simply left. We are not inspectors and we will not report you to anyone – but we will not stay on as the name attached to a kitchen that has decided to ignore us.

WHO DOES IT

Trained where the rating *is public*.

In the UK every kitchen's hygiene rating is published for anyone to read, and a rating of 5 is scored partly on how much confidence an inspector has in the people running it. That is the system he came up in.

OLIVER MAKI, DEAN STREET – 2015
FACE WITHHELD: THE REVIEW ONLY WORKS
UNANNOUNCED

Abhishek Bose

CHEF • ELEVEN YEARS ON THE LINE

City & Guilds Level 3 NVQ Diploma in Professional Cookery – awarded November 2014, New College Nottingham, regulated by Ofqual. Fifteen units, including accredited food safety and workplace hygiene and safety.

- Level 2 food safety, Highfield (2012)
- Chartered Institute of Environmental Health (2014)
- Eleven years on the line in kitchens where an unannounced council inspection was a normal part of the year, not a crisis
- Wrote a kitchen system from nothing – then ran it himself as senior sous chef

WHEN	KITCHEN	ROLE	WHAT IT TAUGHT
2012	Yo! Sushi, Nottingham	Chef	Hygiene as a written system rather than a habit.
to 2014	Turtle Bay, Nottingham	Chef de partie	Held responsibility for the due diligence records.
2014	Chino Latino at Park Plaza, Nottingham	Senior chef de partie	Audited by a hotel group's own internal team, to their standard.
2015	Oliver Maki concept, Kuwait	Concept development	Wrote the process architecture from nothing – storage, temperature control, cleaning, records – to the UK standard, under a different rulebook.
2016	Oliver Maki, Dean Street, London	Senior sous chef	Then ran the system he had written. First name on that kitchen's payroll.
2017	Uni, Belgravia, London	Senior sous chef	High-volume events and canapé service against a live allergen matrix.

Also Wagamama and All Bar One in Nottingham between 2012 and 2014, and The Montague on the Gardens in London before that.

TO BE STRAIGHT ABOUT THE RATINGS

We are not claiming credit for them

The Nottingham kitchens above hold 5 out of 5 on the FSA register today – check the public record at ratings.food.gov.uk. He left years ago; those ratings were earned by whoever is standing on that line now. The point is narrower: this is where he learned, and it is the standard your kitchen will be measured against.

THE HALF THAT MATTERS MOST

He has run the line, not just written about it

Writing a standard and being accountable for holding it on a live section on a Saturday night are two different jobs. Most people who assess kitchens have only ever done one of them. You will not be handed a binder nobody can run.

HOW WE JUDGE

Every limit says *where it came from.*

A consultant's number that quietly becomes "an FSSAI requirement" because it once appeared in a report is how people get misled without anyone deciding to mislead them. So every control we check carries its own source.

SOURCE 01

Regulatory reference

- Traceable to a named Indian instrument
- The Food Safety and Standards Act, or Schedule 4 of the 2011 Regulations
- Cited in the report, re-checked annually

SOURCE 02

Operational default

- Our own working rule, drawn from UK kitchen practice
- Marked as ours, carrying no regulatory claim at all
- Most of the control set sits here, honestly

SOURCE 03

Your own standard

- A rule stricter than ours that you choose to adopt
- Set with you during the review
- Never imposed

NO SCORE, NO GRADE, NO STARS

Counts by severity, and a judgement in plain words

A percentage would be easier to sell — and it would be the wrong thing to sell. A number that resembles a hygiene rating invites you to treat it as one, and that scheme belongs to a regulator, not to us.

WHAT WE ARE NOT

Not an FSSAI-recognised auditing agency

- × This is not a regulatory audit
- × It does not reduce how often you are inspected
- × It certifies nothing. Anyone telling you otherwise about their own service is worth a second look

What it is: an independent, unannounced operational review by a chef, against a written standard — and because we hold no official status, nothing stops us telling you exactly what we found.

AND WHO WE ARE

The standards practice of Kurokaa

- Kurokaa builds restaurant management software. You should know that before you hire us, not after
- So, in writing: your report will never recommend Kurokaa
- Findings say what is wrong and what to do in plain terms — a paper record signed twice a day satisfies every one of them
- If you later want software, that is a separate conversation you start — never a finding we write

THE CONTROL SET

63 controls *across 15 areas.*

Each control has a limit you can measure, a frequency, and a corrective action. This is what we look at in each area.

Receiving	Delivery temperatures, vehicle and packaging condition, date coding, supplier records, what gets rejected
Chilled & frozen storage	Unit temperatures probed into food, stock rotation, covering and labelling, defrost condition, separation of raw and ready-to-eat
Dry store	Off-floor storage, decanting and labelling, open-pack control, date marking, condition of the room itself
Cooking	Core temperatures taken and recorded, probe use at the point of cooking, what happens when a check fails
Hot holding	Holding temperatures, time limits, monitoring frequency, the rule for food that falls out of limit
Cooling	How fast cooked food comes down, method used, where it is placed, what is recorded
Cross-contamination	Separation in storage and prep, board and cloth control, handwashing points, sequence of work on shared surfaces
Allergens	Accurate information at the point of order, storage and prep separation, staff knowledge, how a substitution is handled
People	Fitness to work, hand hygiene in practice, protective clothing, training records that match who is actually on shift
Pests	Proofing, evidence of activity, bait and monitoring points, contractor reports and whether the actions were closed out
Water	Source, storage tank condition and cleaning, potability testing and the date of the last test
Ice	Machine condition and cleaning, scoop storage, handling between machine and glass
Cleaning	Schedule against reality, chemical suitability and dilution, contact times, who signs and whether it was done
Waste & oil	Internal bins, external storage, collection frequency, used-oil disposal and its paper trail
Records & the building	Thirty days of logs, licence currency, probe calibration, plus floors, drains, lighting, ventilation and surfaces

PRICE

Quoted *before we come.*

One conversation, a fixed number, no hourly meter running while someone walks around your kitchen. What moves it inside the range is the size of the operation and how much there is to look at.

₹10,000 – 25,000

PER LOCATION · INCLUSIVE OF 18% GST

- Fixed in writing before you book. No hourly billing, no travel charge within Kolkata
- Scope is set by covers, how many kitchens and storage units, and whether you want the team session on the day
- Half on booking, half on the report. The deposit reserves your window; the balance falls due when the report lands
- Anything critical is told to you out loud on the day — we do not hold back a safety finding over an invoice

EVERY REVIEW INCLUDES

- ✓ An unannounced visit inside a window you agree
- ✓ All 63 controls walked in flow order
- ✓ Your probes checked against a reference
- ✓ Verbal debrief on the day, before we leave
- ✓ Written report within 72 hours
- ✓ A 30-day plan, ordered by what to fix first
- ✓ One follow-up call once you have read it

AFTERWARDS · CHARGED SEPARATELY, QUOTED WHEN YOU ASK

Verification re-visit

Once the thirty days are up. Checks only what your report raised.

Team session

On the controls your own report flagged, run with the people actually on shift.

Quarterly review

So "could we survive Tuesday" stays current — at a repeat-client rate.

Before you book: the 50% booking deposit is non-refundable — it reserves a working day and the travel with it. One reschedule is free if you tell us before the window opens. If we cancel or cannot attend, the deposit is refunded in full. Full detail in the service terms at kurokaa.com/the-pass-terms.

BOOK A REVIEW

Start with *a phone call.*

Twenty minutes. You describe the operation — covers, kitchens, how many people handle food — and you get a fixed quote and a window. No visit is booked on that call unless you want one.

KEPT SEPARATE

Kurokaa builds restaurant management software — you should know that before you hire The Pass, not after. Nothing on this page is part of a review. **Your report will never recommend Kurokaa**; a paper record signed twice a day satisfies every finding. If you want software, that is a conversation you start.

KUROKAA · BUILT FOR INDIAN RESTAURANTS

You know money is leaking. *Now see where.*

Kurokaa counts every sale down to the gram of ingredient, reconciles your cash at the end of each day, and shows you what each dish actually costs to make. One system, end to end — no add-on modules, no separate logins, no per-feature pricing.

Purchase register & ITC

Licence & filing calendar

Opening & closing food-safety checks

Kurokaa prepares your GST returns and hands your accountant clean, reconciled numbers — it doesn't file on your behalf. Every figure traces back to the sale, purchase or count it came from.

GETTING STARTED

Upload your menu once

Kurokaa builds your products, ingredient links and station tagging. The numbers nobody can guess — recipe quantities, batch yields, purchase prices, opening stock — come from one guided worksheet. We'll fill it with you, or you start billing the same day and fill it in as you go.

PRICING

₹ 999

Per location, every 30 days, inclusive of taxes. 30-day free trial, everything switched on. No auto-debit, no lock-in.
